For safe transport and storage of lithium batteries

- Innovative outstanding design
- International standard
- User convenience
- All lithium batteries
- Buncker pro line lite and heavy
- Supply chain solution

- ✓ BUNCKER thinks, acts, and innovates from the needs and questions of the market, companies, and its users. BUNCKER is always looking for the perfect match of its solutions in the total supply chain, the (primary) process, and in combination with a safety plan to prevent safety critical situations with multiple levels of defense to minimize the serious consequences of a short circuit in a lithium battery and a thermal runaway. BUNCKER provides its users with "action perspective" at the times when one or more lithium batteries threaten to cause an unsafe situation.
- ✓ BUNCKER Pro Lite and Heavy Line is a product range of multifunctional packaging to safely transport and store all types of lithium batteries; new, intact, defective, damaged, or suspect. Because in the development the entire supply chain and (production) processes were integrally considered, this innovation offers many varied solutions for everyday obstacles of users. Two types of packaging for all lithium batteries. Pro Lite Line for classification of intact batteries (new and used) and the Pro Heavy Line for classification of non-intact lithium batteries. From the packaging instruction ADR, the Pro Heavy Line covers packaging class P908 P911, and the Pro Lite Line covers packaging class P903 P909. For the Dutch regulation which provides guidelines and rules for energy storage systems and the storage of lithium batteries, the Pro Lite Line with a fire resistance of 90 minutes, is a good fitting solution. The latter as part of a quality plan with among other things organizational measures that are situation and customer dependent.
- ✓ The BUNCKER Pro Lite and Heavy Line are very user-friendly, can be operated by one person, and has no loose/additional inner packaging or loose filling material. In addition, the product is easy to maintain, robust, reusable, and stackable, which allows for more efficient and effective work, resulting in a cost advantage.
- Special features of the BUNCKER Pro Heavy Line are the pallet base and the bell jar, and of the BUNCKER Pro Lite Line are the pallet base and the loose folding sides.

Bel Jar Design

- Easy and smart handling
- ✓ Placing multiple batteries on the surface
- Moving batteries in the process
- Different heights
- Fixation with straps
- ✓ All parts are stackable
- ✓ Forklift and lifting ring

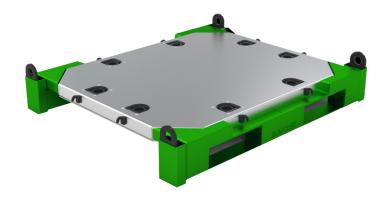

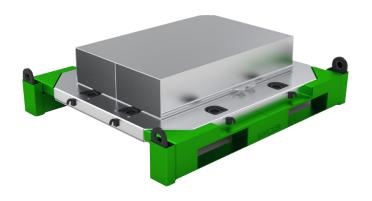

International Standard

- ✓ Format: blok pallet size based
- ✓ Supply chain: transport & storage & proces
- ✓ Regulations nternational transport: adr, iata, imdg, rid

User Convenience

- ✓ One man handling
- ✓ No filling material / inner packaging
- No maintenance and service
- All type of lithium batteries
- ✓ Less spacing stackable

About Fire Suppression Solutions

Fire Suppression Solutions is the US Master Distributor of GreenEx Aerosol Fire Suppression Solutions. We provide integrated safety products, solutions and services to players in the energy, logistics and industrial fields who face new safety challenges with lithium batteries every day.

We supply our total concept to several major players in the field of lithium batteries and have extensive and valuable experience in preventing and managing incidents involving lithium batteries.

Fire Suppression Solutions is your supplier of highly effective, innovative, and environmentally friendly fire suppression and extinguishing systems for almost all thinkable applications. Thanks to our international network you immediately have the right specialist at your disposal.
